

# RoboVu Family & Services

## Robo III

### *Military Tested, Public Safety Approved*

For first responders, police, fire and EMS personnel, having access to critical data in all environments affords a superior advantage. When choosing a mobile computing system, choose the one that's successfully passed the toughest tests on the toughest proving grounds: the battlefield. The Robo III has a military pedigree, having been developed for the U.S. armed forces. The Robo III incorporates a number of state-of-the-art features housed in a small, but extremely rugged footprint.

## RoboCAM

### *Digital Video Management System*

RoboCAM is made up of 4 components: **RoboEYE, RoboHUB, RoboPRY** and **RoboSYNC**. All four provide for an integrated digital video management system designed for large municipalities, but cost effective for the smallest of agencies. It allows for agencies to start with smaller projects and grow into managing multiple vehicles and fixed locations. The RoboCAM is integrated to the Robo III Mobile Data Computer, so no need to have a trunk mounted PC.

## RoboSPY

### *Network Video Surveillance*

RoboSPY Security Solutions bring network security, information management and storage, video surveillance, and analysis to your agency or department. The Physical Security Solutions enable you to manage, archive, protect, authenticate, and scale your security systems and video surveillance information more effectively, increasing your capacity to detect, deter, and analyze security events in real time.

## Installation

### *Certified Professionals*

A key factor to providing a successful MDC, Video or LPR project is making sure it is installed properly. We have certified installation professionals that can do the complete project on-site or off-site or we can train your installation team as well. Utilizing the same approach the military does on their equipment, RoboVu focuses on the Safety, Uptime and Ergonomics. If you would like RoboVu can provide a wire diagram after we have completed the installation to make maintenance and service that much easier.

## Support

### *Get Up and Running Fast*

The one area that seems to be overlooked when evaluating a MDC, Video or LPR project is the training and support; even though, that is one of the most important pieces of the puzzle. RoboVu offers on-site training standard with any purchase and the most responsive customer service in the market. After all it is technology, so you should have an exact process in place to keep the technology up and running – not sitting out of service.
